3.2.1: Institution has created an ecosystem for innovations, Indian Knowledge System (IKS), including awareness about IPR, establishment of IPR cell, Incubation centre and other initiatives for the creation and transfer of knowledge/technology and the outcomes of the same are evident

The college creates an environment where instructors and students may exchange technical knowledge to speed up the invention process via the utilisation of the incubation facility. To support research endeavours, the college creates a research and development section under the direction of the principal.

The main focus of the Research and Development cell is student projects, big and small, that are carried out during the academic year and are supported by different funding organisations. With the help of the research and development cell, staff members and students may publish high-calibre papers in respected journals with a high impact factor.

The Research and Development area offers instruction on how to locate credible publications, create papers, and prevent plagiarism. Academics and students may use all of these resources to assist them finish their research assignments. The administration shows a special interest in research projects and encourages academic members and students to explore new and creative ideas by providing the required resources and funding. Every year, students from many academic fields collaborate to create novel and inventive ideas at the Ideathon event. The College's Entrepreneur Development Cell (EDC) aims to develop entrepreneurs who create jobs through technology and to improve students' competence in order to meet global demand and new challenges to create employment. It does this by giving students the chance to visit industries, attend and participate in workshops, and develop their managerial and leadership skills. Providing students with the chance to tour industry helps achieve this. Student participation in acting, self-employment, and starting small or microbusinesses are all highly encouraged.

Among the skill sets required to succeed as an entrepreneur are resource planning, human management, financial planning, marketing management, and manufacturing expertise. In order to help aspiring engineers become prosperous entrepreneurs, the EDC hopes to provide them the chance to learn about these areas of need.

The institution wants to reduce the difference between the two. Opportunities for learning are given to students, and throughout their stay at the school, an atmosphere that supports their interests in research and social responsibilities is promoted.
